## Business benefits

Thousands of UK companies have already chosen the reliability and performance of the Sage 200 Suite and are realising the benefits in their day to day business.

### ● Web Chat

Chat with a sales advisor now

See how Sage 200 could help your business.

### ● Peace of mind

Sage 200 Construction gives you confidence that your business is HMRC compliant - ensuring the accurate recording, verifying and reporting to HM Revenue and Customs (HMRC) on subcontractor tax (CIS).

It improves accuracy and saves valuable time by enabling subcontractor recording, verification and monthly (CIS 300) report submissions via our Internet Submissions Module. It also has similar functionality for subcontractor tax (RCT) in the Republic of Ireland.

### ● Optimise contract performance

Sage 200 Construction provides you with an effective strategy for contract negotiations and helps to reduce the business risks involved in the delivery of construction projects.

It provides effective contract management with up-to-date information on all contracts the moment transactions are entered, with full drill down from subcontractor and supplier, through analysis codes and groups to transaction detail line.

Sage 200 Construction saves you valuable time with the ability to run enquiries on contracts from receipt, through supplier/subcontractor, to cost completion and quote production, with all information being transferred into contracts, with no re-keying of data. Applications, certificates, payments, and invoices may all be produced recording important contract information such as retentions and discounts.

### ● Complete management of budgets and costs

Sage 200 Construction allows you to control costs on contracts, meet contract budgets, track subcontractor insurances, generate purchase orders for subcontractors, materials and plant hire, and track materials delivered and On/Off hire dates.

It helps you spend less time costing out jobs by enabling you to monitor actual costs against estimated/budget costs, so you can identify overspends immediately and eliminate the duplication of processing so overhead costs are reduced.

### ● Greater business efficiency

Tight integration with Sage 200 Financials, Sage 200 Commercials, and Sage 50 Payroll ensures key financial data is shared across the organisation providing you with greater business efficiency. It integrates your stock so it can be booked out by your staff and automatically updated in your accounts system.

Through the payroll integration timesheets can be processed, eliminating repeat entry and saving you time. You can further save essential time by automating the management of sub-contractors and removing manual processes.

It allows you to record applications and generate both self-billing and authenticated receipts, with automated retentions, CITB deductions, discounts and CIS processing.

### ● Greater customer service

All the hard, time-consuming work of managing your suppliers, customers and contractors is done for you as data is fully synchronised between your accounts and CRM software. You can also keep track of all your contractors and suppliers, with essential information being available to your customer-facing staff.

### ● Standardise working practices

Sage 200 Construction provides you with the tools to standardise your business processes and streamline the way you manage jobs whether it be budgets, reports, quotations or contract management. This streamlining of project execution provides consistency making it easier for your staff to move from one job to another. In addition, improved control of your construction processes enables you to improve on-time delivery of projects, and improve customer satisfaction.
